                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Db
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to truncated VRP (vascular endothelial growth CC factor (VEGF) related protein) subunits that have at least one amino CC acid N. terminal to the first Cys of the core sequence deleted. Host CC cells transformed or transfected with expression vectors containing CC nucleic acids encoding the truncated VRP subunits are used to produce the truncated proteins recombinantly. The truncated VRP subunits, or and in vitro captionally expressed from gene therapy vectors, have in vivo and in vitro angiogenic activity and are used to stimulate angiogenesis, particularly CC coronary collateral vessel development in cases of cardiac ischaemia; to stimulate endothelial cell growth and migration in vitro; to treat heart CC disease; to treat ischaemia (e.g.cardiac, chronic coronary or chronic coronary comunds (of skin or intestines), and to increase vascular CC lower limb ischaemia; stroke and peripheral vascular disease); to promote CC healing of wounds (of skin or intestines), and to increase vascular CC permeability. Sequences AAW86234 to AAW86239 represent full length VRP CC sequences from which the truncated fragments are created.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Qγ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This polypeptide comprises a human foetal liver kinase 1 binding protein (flk-lbp) (see AAW17837) that binds to the receptor tyrosine kinase flk-l expressed on vascular endothelial and other cells.

The mature flk1-bp can be secreted from host cells transformed with an expression vector including an isolated flk-lbp cDNA clone (see AAT68811). Flk-lbp can be used to isolate cells to which it binds, for use in studying the roles of such cells and of flk-l in vasculogenesis and angiogenesis. Angiogenesis inhibition or increased vascularisation may be clinically desirable (e.g. to suppress solid tumour growth or in wound healing, respectively). The flk-lbp can be administered to treat conditions with defective or insufficient flk-l. Polypeptides may also act as carriers to deliver diagnostic/therapeutic agents to cells to which flk1-bp binds, to generate antibodies, and to identify flk-lbp antagonists useful for treating flk-lbp mediated conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                     claimed methods for detecting endothelial cells (e.g. to image lymphatic vessels, endothelial venules, Flt4 receptor in histochemical tissue) and also to maintain the growth of mammalian endothelial cells (e.g. to accelerate angiogenesis and to promote endothelial function of lymphatic vessels). Inhibitors of VEGF-C, such as antibodies, can be used to control endothelial
                                                                                                                                                                                                                                                                                                                                         This polypeptide comprises the pre-pro sequence of human VEGF-C, a novel ligand that binds specifically to human F1t4 receptor tyrosine kinase (VEGFR-3), stimulating phosphorylation of the receptor. Its sequence was deduced from a cDNA clone (AAT84276) obtd. from a PC-3 prostatic adenocarcinoma cell (ATCC CRL 1435) library. The polypeptide, or its active fragments, can be expressed in transformed or transfected host cells for use in
                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                            cell proliferation, e.g. lymphangioma or metastatic cancer.
Mouse and quail VEGF-C sequences (see AAW00934-35) have also been

                                                                                                                                                                                       Human vascular endothelial growth factor 2 (VEGF2) (AAW11478) is structurally related to the VEGFYDDGF family and is a potent mitogen for vascular endothelial cells, stimulating their growth and angiogenesis. The amino acid sequence of VEGF2 was deduced from a cDNA clone (AAT51371) obtd. from an early stage human (week embryo cDNA library. VEGF2 polypeptides can be produced in transformed host cells and used to promote angiogenesis e.g., to stimulate the growth of transplanted tissue following coronary bypass surgery, or to promote endothelialisation in vascular graft surgery. It can also be used to screen for antagonists (useful e.g. for tumour therapy) and agonists of VEGF2 activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Key

                                                                                                                                                                                                                                                                                                                                                                       The vascular endothelial growth factor C (VEGF-C) polypeptides have activities affecting growth and migration of vascular endothelial cells, promoting growth of lymphatic endothelial cells and lymphatic vessels, increasing vascular permeability, and affecting myelopoiesis. The products can be used for stimulating angiogenesis, for inhibiting angiogenesis, for stimulating lymphangiogenesis, treatment or prevention of inflammation, oedema, elephantiasis, or Milroy's disease. They can also be used for modulating the growth of endothelial cells. They can also be used for modulating the growth of endothelial cells. They can also be used for modulating the growth of endothelial cells. They can also be used for modulating the growth of endothelial cells. They can also be used for modulating the growth of endothelial cells. They can also be used for modulating the growth of endothelial cells. They can also be used for middlate lymphocyte production and maturation, and to promote or inhibit trafficking of leucocytes between tissues and lymphatic vessels or to affect migration in and out of the thymus.

The products can be used for stimulating angiogenesis, for inhibiting angiogenesis, for stimulating lymphangiogenesis, treatment or prevention of inflammation, oedema, elephantiasis, or Milroy's disease. They can also be used to modulate myelopolesis, e.g. treating granulocytopenia. They can also be used for modulating the growth of endothelial cells. They can also be used for modulating the growth of endothelial cells. They can also be used for modulating the growth of endothelial cells. They can also be used for modulating of leucocytes between tissues and lymphatic vessels or to affect migration in and out of the thymus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated vascular endothelial growth factor polypeptide(s) - used to develop products for treating, e.g. cancers, inflammation, oedema, granulocytopenia or for wound healing or tissue
Vascular endothelial growth factor-2 (VEGF-2).

                                                                                                                                                                                                                                                                                                                             activating or inhibiting the proliferation, differentiation, or mobilization (chemotaxis) of immune cells. The etiology of these immune deficiencies or disorders may be genetic, somatic, such as cancer or some autoimmune disorders, acquired (e.g. by chemotherapy or toxins), or infectious. Examples of immunologic deficiency syndromes include blood protein disorders, ataxia telangiectasia, common variable immunodeficiency, Digeorge syndrome, HTV infection, HTLV-BLV infection, leukocyte adhesion deficiency syndrome, lymphopenia, phagocyte bactericidal dysfunction, severe combined immunodeficiency (SCIDs), Wiskott-Aldrich disorder, anemia, thrombocytopenia, or hemoglobinuria. They can also be used to modulate emostatic or thrombolytic activity.

                                                                                                                                                                                                                                                                                            Similarly allergic reactions and conditions such as asthma (particularly allergic asthma) or other respiratory problems, may also be treated.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           medical condition. The VEGF-2 polypeptides or polynucleotides may be useful in treating deficiencies or disorders of the immune system, by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence represents vascular endothelial growth factor-2 (VEGF-2). The VEGF-2 polypeptides have activities similar to VEGF. The VEGF-2 polypeptides have activities similar to VEGF. The VEGF-2 polypeptides stimulate the growth of vascular endothelial cells, stimulate endothelial cell migration, stimulate angiogenesis, decrease blood pressure, and increase blood flow. The polynucleotides and polypeptides can be used for preventing, treating or ameliorating a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             vascular endothelial cell growth; endothelial cell migration; angiogenesis; blood pressure; blood flow; immune system disorder; immune cell; cancer; autoimmune disorder; blood protein disorder; ataxia telangiectasia; common variable immunodeficiency; pigeorge syndrome; HIV infection; HTLV-BLV infection;

The truncated VRP subunits, optionally expressed from gene therapy vectors, have in vivo and in vitro angiogenic activity and are used to stimulate angiogenesis, particularly coronary collateral vessel development in cases of cardiac isohaemia; to stimulate endothelial cell growth and migration in vitro; to treat heart disease; to treat ischaemia (e.g.cardiac, chronic coronary or chronic lower limb ischaemia; stroke and peripheral vascular disease); to promote healing of wounds (of skin or intestines), and to increase vascular permeability.

The invention provides truncated VRP (VEGF-related protein) subunits that have at least one amino acid N-terminal to the first Cys of the core sequence deleted. Host cells

An antisense molecule of the invention is useful for treating or preventing cancer, rheumatoid arthritis, psoriasis and diabetic retinopathy by inhibiting angiogenic activity or inappropriate vascularization including formation and proliferation of new blood vessels, growth and development of tissues, tissue regeneration and organ and tissue repair in a subject. The products of the invention are useful for preparing medicaments for treating wounds such as dermal ulcers, pressure sores, venous sores, diabetic ulcers and burns and to promote skin graft growth, tissue repair, proliferation of new blood vessels, tissue regeneration and organ repair by promoting angiogenic activity or vascularization. This sequence represents the human VEGC protein used to illustrate the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       22-DEC-1998;

It was used to demonstrate the methods of the invention, which involve the screening of individuals to determine which vascular endothelial growth factor receptor 3 (VEGFR-3, also known as Flt4 or fms-like tyrosine kinase 4) alleles they possess and thus their likelihood of developing hereditary lymphoedema. Conditions associated with lymphoedema include Milroy-Nonne syndrome,

                                                                                                                                                                                                    밁
                                                                                                                                                                                                                           QΥ
                                                                                                                                                                                                                                                                                                                                        CC by expression of fms-like tyrosine kinase 4 (Fit4) receptor (also cendothelial cells of blood vessels adjacent to malignant neoplasm. The method involves administering a compound that inhibits binding of a compound that inhibits binding of a compound that the compound to Fit4 thereby inhibiting Fit4 mediated proliferation of vascular compound to Fit4 thereby inhibiting Fit4 mediated proliferation of vascular compound to Fit4 thereby inhibiting Fit4 mediated proliferation of vascular compounds can be used to treatment of malignancies characterised by Fit4-expressing blood cells. The compounds cell carcinomas, lymphomas, melanomas compounds can be used for manufacturing medicament useful for diagnostic screening, imaging and compounds can be used treatment of malignancies characterised by Fit4-expressing blood cells. The Fit4 gene maps to chromosomal region 5q35 and is expressed as 5.8 kb compounds to a subfamily of class III receptor tyrosine kinases (RTKs). It is used as a target for tumour imaging and anti-tumour therapy. CC The present sequence is a human prepro-vascular endothelial growth continued the compound.
                                                                                                                                                                                                                                                              Matches

The present amino acid sequence is the complete human prepro-vascular endothelial growth factor (VEGF)-C. VEGF-C has the ability to stimulate re-endothelialisation of an injured blood vessel, without significant stimulation of smooth muscle cell proliferation. It can bind to and stimulate VEGFR-2 (vascular endothelial growth factor receptor) and/or VEGFR-3 phosphorylation in cells that express such receptors. An anti-restenosis agent comprising either a VEGF-C gene or protein is used in a method to reduce or prevent restenosis and stenosis of a blood vessel following vascular trauma e.g., cardiovascular surgery and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches 102;
(lymph)angiogenesis. The proteins are also used to identify specific binding agents (potential therapeutic agents) and to raise antibodies. The antibodies are useful as therapeutic (ant)agonists; for detection, purification and targeting of proteins for in vivo or in vitro diagnosis (including imaging) or for therapy (including when linked to e.g. a label or cytotoxin); and for immunotyping of cells, e.g. for detecting minimal residual disease or haematopoietic progenitor/stem cells. It is also contemplated that the sequences might be useful for treating a very wide
                                                                                                                                                                                                                                                               ameliorate disease and to detect diseases, or susceptibility, by detecting mutations or the presence or amount of angiogenic protein expression. Particularly they are used to stimulate wound healing, growth of damaged bone and tissue, and for repair of vascular tissue, especially peripheral arterial disease, critical limb ischaemia or coronary disease. Antagonists of the sequences are used to inhibit angiogenesis in tumours and to treat inflammation (where associated with increased vascular permeability), diabetic retinopathy, rheumatoid arthritis or psoriasis. Agonists are also useful for stimulating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New nucleic acid encoding angiogenic proteins, useful e.g. for promoting healing of wounds and treating peripheral arterial disease, critical limb ischaemia or coronary disease -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               which is an angiogenic protein of the invention. The angiogenic proteins and the DNA sequences encoding them, are used to prevent, treat or

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Score
